Corporation Associates

Engineering & Design

## Product Development, Prototype, and Full Production

Corporation Associates Engineering and Design provides you with a partner that you can reach out to at any point in the design cycle. We take every challenge with decisive action resulting in quick turnaround.

Your needs are important to our Associates. We will help you with new product introduction, wafer design, analog/digital circuit design, RF design, sensor integration, battery management, and security.

Speen to market is important, that is why we established an on-site proto lab. Our team will produce the first article, product validation and testing, thus preparing you for full production.

Our service offerings include establishment of supply chain, with sourcing, BOM creation and management, prototype production, test procedure creation and product testing, manufacturing line bring-up, final assembly and test, and system burn-in.

Contact our sales team to discuss your needs. We help with Internet of Things, mobile devices, wearables, consumer products, medical products, as well as robotics.

Incorporate the design element

A products design is as important as the product itself. Corporation Associates employs designers to help you with the final look and feel.

To get started, call your Primary Associate and begin a conversation about your goals. Our design team will help with:

- Product shape and color
- Product weight
- External materials
- Moving/stationary parts
